

What is the renewable energy transition?

Around Australia, governments, businesses and communities are working together to reach net zero greenhouse gas emissions by 2050. This means changing from using coal power to using renewable energy like wind and solar power.

There are deadly Aboriginal and Torres Strait Islander peoples working to ensure First Nations communities benefit from this transition now and into the future.

What is net zero? Net zero means making sure the amount of emissions we put into the air is the same as the amount we take out.

Why is this important?

Caring for Country has always been important for First Nations communities and the renewable energy transition will help to take action to stop the worst effects of climate change.

What are the opportunities and benefits for First Nations communities?

Jobs

Supply chain participation

Co-creation of projects

Training new and current workers

Cleaner energy for communities

Australian Government
