

I'm an educated financial planner with [REDACTED] experience giving advice, analyzing statistics, with a [REDACTED] I followed the reported statistics throughout the Covid period with concern about media inflammation on the topic and the lack of specific data reporting publicly, although information was provided here: [COVID-19 reporting | Australian Government Department of Health and Aged Care](#). Fear was an outcome obtained and the bullying of the Australian public by State and Federal governments was not in the interest of individuals. **The inaccurate reporting is concerning, so too was the single treatment response advocated, along with the ineffective government stimulus program.** Many questions are asked in this submission to drive conversation on risk / return and who really was most at risk, as I don't want to see Australian's bullied into a single health response in the future. "Stay Safe" was the mantra of the day for a flu, termed Covid-19, Coronavirus based, novel in nature, a flu type virus which the world has encountered in the past and will encounter in the future. This has been the case for thousands of years, we live with many viruses, most are harmless otherwise we would already all be dead!

Statistics are information used to infer relevance and particularly so in finance, with a risk / return tradeoff, which can be applied to health. **How many times were questions raised about the accuracy of the reported Covid death figures?** "Did he die with Covid, or from Covid" was common, particularly by families with elderly parents passing, with 2.5+ co-morbid conditions, though pre-existing health information wasn't reported. The information I collated was based on Covid-19 website reported numbers, though I believe these to be at best overinflated, and uninteresting modest when compared to historical flu / pneumonia deaths, as reported by the Australian Bureau of Statistics (ABS), which in 2018: <https://www.health.gov.au/news/health-alerts/novel-coronavirus-2019-ncov-health-alert/coronavirus-covid-19-case-numbers-and-statistics>

was 3,102.

By the 19/3/2022 total Covid deaths were 5,397 since the "pandemic" commenced early 2020, though the ABS figure is for a 12-month period. **Why was this pandemic reported on everyday by state leaders as so deadly, with the ONLY health recommendation to get vaccinated?** Attempting to vaccinate against virus that would look different in me than you, with the same approach is an unintelligent approach to health. **Why was the Australian public told to have the "safe and effective" vaccine, as it stops transmission, sorry, reduces symptoms, though so too would vitamin C.** Billions have taken an experimental vaccine approved for emergency use after discrediting decades long established, Nobel prize winning alternatives including Ivermectin and Hydroxychloroquine. **What due diligence did the Australian State and Federal governments take to support this approach?** I am pro science, though there were no randomized double-blind placebo-controlled gold standard studies on non-liability pharmaceutical companies, **why?**

The Australian public was bullied with limited information, forced to stay at home, give up employment if not vaccinated, facing [REDACTED] lambasting that "no one forced you to get vaccinated". There was no choice for most as large corporates required vaccination for employee's, how is that legal, and then other sectors such as health cry out for workers they just fired! **What protections will the government put in place to provide freedom of medical choice?** Policies aren't levied against political, sexual, and religious beliefs yet, so **will the Australian public lose their health autonomy under the premise of "safe and effective" in the future?**

The data captured until the 19/3/2022 includes the following from the Covid-19 website mentioned above, with some comments added for insight to draw relevance / risk to the information:

Australia Covid deaths	27/10/2020		24/10/2021		19/03/2022		Total Deaths	Total %	
	Male	Female	Male	Female	Male	Female			
90+	114	199	156	236	615	726	1341	24.85	
80-89	181	195	298	283	1,150	805	1955	36.22	61.07% over 80
70-79	99	55	207	126	781	394	1175	21.77	82.84% over 70
60-69	26	12	104	44	351	174	525	9.73	92.57% over 60
50-59	10	5	56	34	150	90	240	4.45	
40-49	2	0	20	9	55	35	90	1.67	2.91% under 50
30-39	2	0	7	5	31	19	50	0.93	
20-29	1	0	6	2	11	4	15	0.28	
10-19	0	0	1	1	1	1	2	0.037	0.04% under 20
0-9	0	0	0	0	1	3	4	0.001

Herd immunity is a positive consequence of living in a society and the information clearly highlights who was most likely to die from Covid-19, the elderly. Though schools were closed, businesses were shut down, and then \$320 million dollars was printed and pumped into the economy inefficiently, increasing national debt by 60% and creating inflationary pressures over time through an increased money supply. Australian's were bullied out of a job and into a forced medical procedure when the majority of the workforce, **under 60 years of age, accounted for less than 10% of total Covid deaths! Why wasn't this information communicated to the Australian public to provide context that deaths were mostly in the elderly, you know with on average more than 2.5 co-morbid conditions?**

I saw lives ruined financially and then medically, as personal health has deteriorated following the receipt of an experimental vaccine, requiring the cessation of employment, exercise even due to heart related conditions. **The whole Covid-19 charade was at the expense of the Australian people, where the survival rate of Covid was 98.98%, with the average age of death being 80.65.** Only 10% of deaths related to 60–69-year-olds, with 82.84% of deaths in individuals over age 70, though an entire workforce was sent home. **What psychological health issues have been forced upon the entire nation when the survival rate was 99%?**

**In summary,** reported information should be accurate and communicated appropriately by the media, this data should include a summary of the individual's death and pre-existing conditions. Medical treatments require gold standard assessment prior to "forced" distribution, this is required and involve independent, unbiased, non-conflicted medical professionals from around the world. A 60% increase to national debt to address a problem the government created should not have occurred, the economy should never go into lock down again, particularly as those at risk are retired.
